

Field Mycology

Vol. 26 (3) October 2025

CONTENTS

Editorial — Clare Blencowe	74
Fungal Portrait No. 103 : <i>Gibellula attenboroughii</i> — Harry C. Evans	75
Join FunDive and help mycologists gain a deeper understanding of fungal diversity in Europe! — Louis Mielke, Danny Haelewaters <i>et al.</i>	78
' <i>Mycena dasypus</i> rediscovered after 30 years': the sequel — Penny Cullington	87
Fungi Royale from Kensington Gardens and Hyde Park — Andy Overall	92
Fun with aquatic hyphomycetes — Fay Newbery	96
Three interesting <i>Cortinarius</i> species from Anglesey and Caernarfonshire — C. E. Aron	99
Fungal Futures: Conservation news and views — Matt Wainhouse, Rich Wright & Kat O'Brien	102
The Fungal Records Database of Britain and Ireland. Getting data flowing: exploring the application of 'verification' to fungal records — Stuart Skeates & Clare Blencowe	105
Book Reviews	
Planet Fungi — reviewed by Alick Henrici	106
A Brush with Fungi — reviewed by Lukas Large	107
Regulating the names of fungi: International Code of Nomenclature for algae, fungi, and plants (Madrid Code) — reviewed by David L. Hawksworth	108

Front cover: A group of *Mycena olivaceomarginata* (Browne's Bonnet), showing their coloured gill margins nicely, which popped up in Geoffrey Kibby's lawn this September, in Norfolk. Good to know he is enjoying his garden! Photograph © Geoffrey Kibby.

Back cover: An observation of *Favolaschia claudopus* (Orange Porecap) reported from Brighton in south-east England in September 2025, with a springtail taking an interest. This is one of the species being studied by the FunDive project (see article on pages 78–86) through their 'Eyes on Alien Mushrooms' campaign (<https://fungi-dive.eu/en/get-involved/current-projects/eyes-on-alien-mushrooms/>). Photograph © Max Mudie.
